Screw-Type Flow Meter

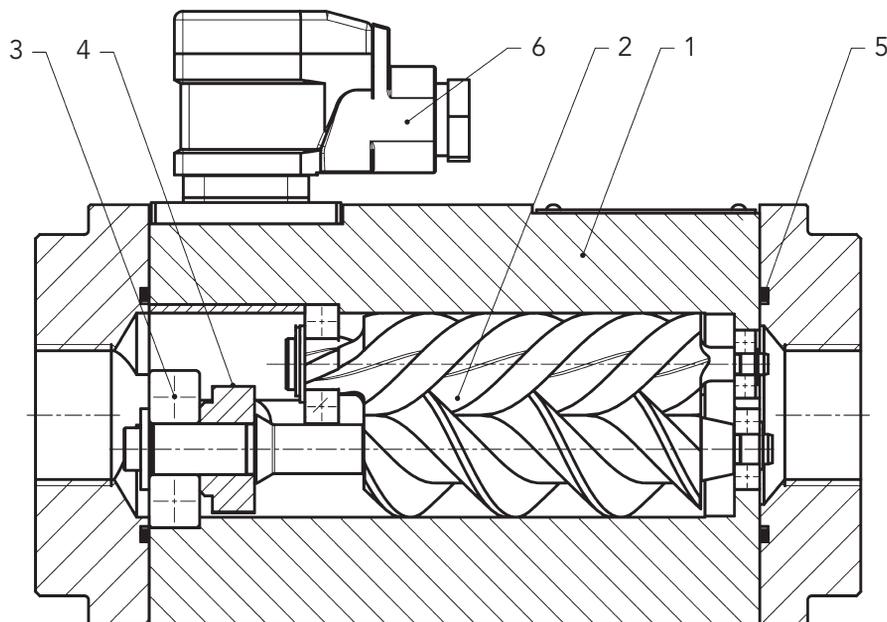

SVC

Description

Screw-type flow meters belong to the group of positive displacement flow meters. Two measuring spindles (pos. 2) with a screw-shaped profile engage with each other. They are low-friction mounted using roller contact bearings (pos. 3) and enclosed by a housing (pos. 1). The liquid flow causes the spindles to rotate and passes through the device in an axial direction. In so doing, self-contained part volumes are formed which are continuously filled and emptied. This principle of measurement causes no pressure and/or flow pulsations.

A sensing wheel attached to the measuring spindle (pos. 4) is scanned by two non-contact sensors. Using two sensors, a bidirectional flow with detection of flow-direction is possible. The inflow and outflow occurs almost without deflection. Consequently, the device exhibits a relatively low drop in pressure. Measuring this way does not require the flow to be calmed at the inlet and outlet. All moving parts are lubricated by the measurement medium.

Construction

- | | |
|-------------------------------------|-----------------------------|
| 1 Housing | 4 Sensing wheel and sensors |
| 2 Measuring system (screw spindles) | 5 Seal (O-ring) |
| 3 Bearing (roller contact bearing) | 6 Connection |

Product Characteristics

- Very low pressure drop
- High-response measurement
- Measurement with changing flow direction
- pulsation free measurement principle
- High working pressure
- Very low noise emission
- Measurement independent of viscosity within the specified ranges
- High-precision measurement with outstanding reproducibility
- Temperature-independent output signals over a wide temperature range
- High degree of accuracy, even with low flow rates at the bottom end of the measuring range
- High working reliability of the electronics
- Easy to use terminal of the preamplifier
- Working indication of the electronic
- Sensor system and preamplifier in EMC-compatible design
- Explosion-proof version available (ATEX)

Accuracy Characteristics

The accuracy figures quoted by KRACHT refer to the impulse volume [cm³/Imp], that is to say the percentage deviation applies to the current value in each case.

The linearity error over the entire measuring range is $\leq \pm 0.1\%$.

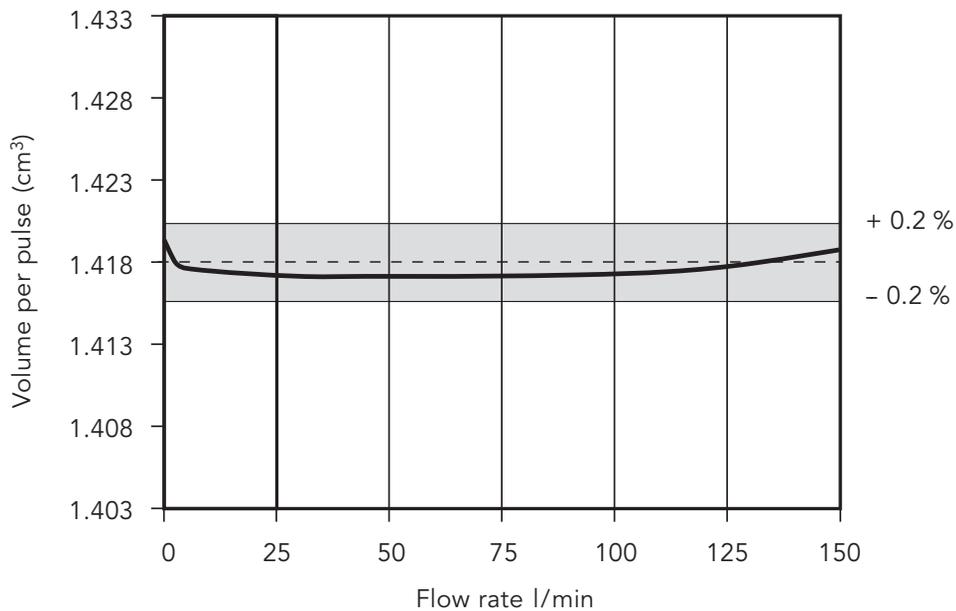

From a viscosity of 20 mm²/s amounts the accuracy $\leq \pm 0.2\%$ about the whole measuring span of 1 : 150.

Accuracy checking forms part of quality inspection in every case.

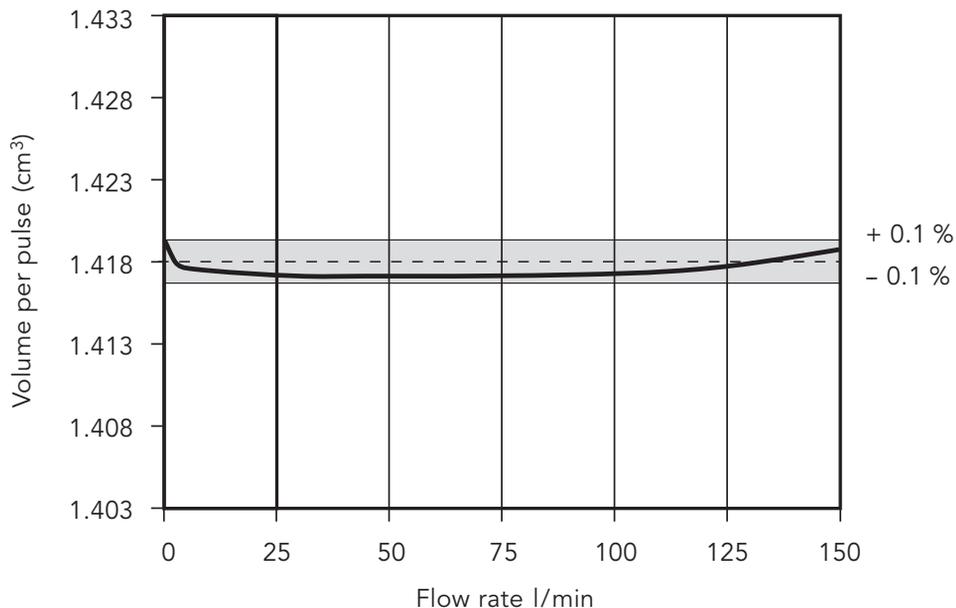

On request the result of the test will be documented in the form of an accuracy characteristic curve; an example relating to a SVC 10 A1 is given below.

The accuracy values quoted by Kracht are confirmed by the DKD (German Calibration Service).

Accuracy

Electrical Connection

Electrical Characteristics

Number of measuring channels	2	Pulse offset between two channels	$90^\circ \pm 30^\circ$
Operating voltage	$U_{op} = 12 \dots 30$ VDC polarized	Power requirement	$P_{b\ max} = 0.9$ W
Pulse amplitude	$U_A \geq 0.8$ U_B	Output power/channel	$P_{a\ max} = 0.3$ W short-circuit-proof
Pulse shape with symm. output signal	square wave pulse duty factor/channel $1:1 \pm 15\%$	Degree of protection	IP 65 DIN 40050
Signal output	PNP (NPN on request)		

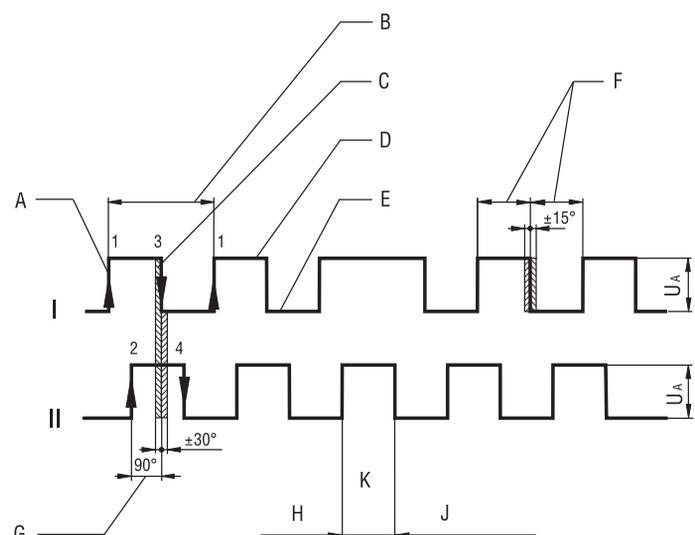

Signal Characteristics

Channel I

- A rising edge
- B one pulse (corr. to flow rate of geom. tooth volume V_{gz})
- C falling edge
- D ON phase
- E OFF phase
- F pulse duty factor $1:1 \pm 15\%$

Channel II

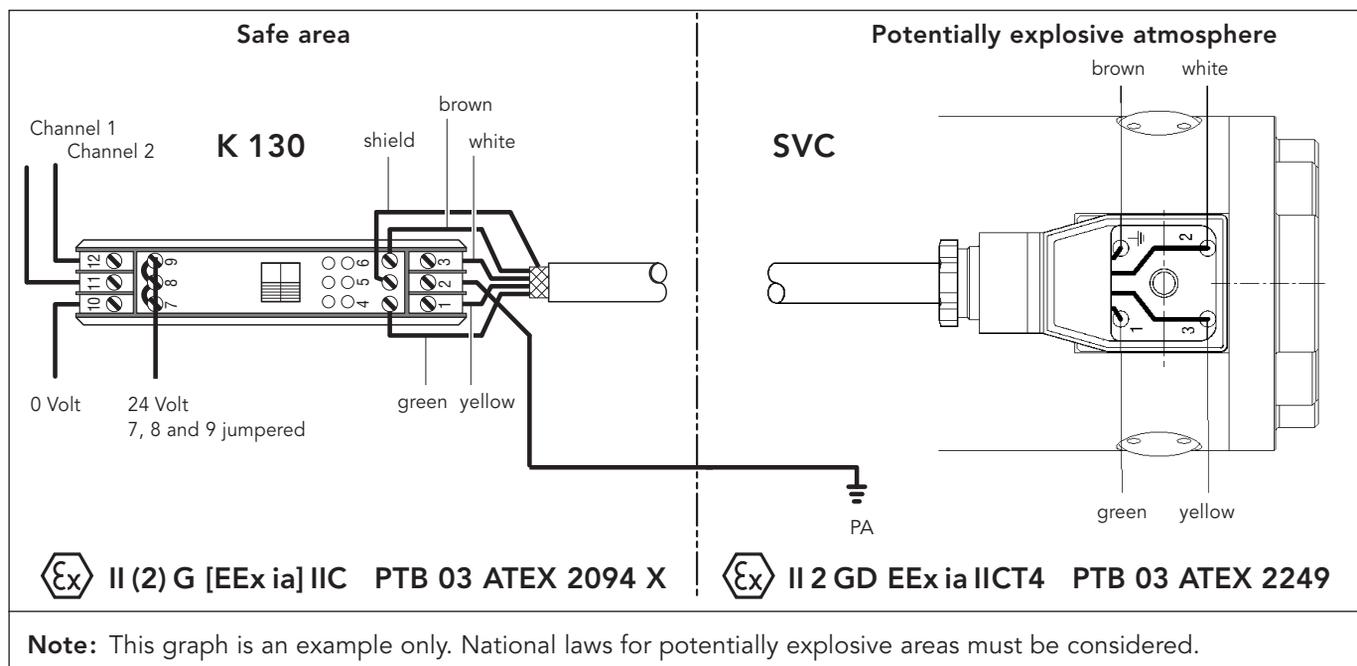

- G channel offset
- H flow direction 1
- K reversal of flow direction
- J flow direction 2

Explosion-Proof Design (ATEX)

Function

- All screw-type flow meters are available in explosion-proof design according to ATEX.
- The explosion-proof design consists of the screw-type flow meter (intrinsically safe electrical apparatus) and the switching amplifier K 130 (associated electrical apparatus). The type of protection „intrinsic safety“ applies to this construction.
- The screw-type flow meter is installed in the potentially explosive atmosphere.
- The mounting of the amplifier K 130 is carried out in the safe area.
- Screw-type flow meter and switching amplifier are electrically connected to each other. The switching amplifier evaluates the sensor signals and converts them to square-wave signals.
- Without switching amplifier, the screw-type flow meter must not be operated in the potentially explosive atmosphere.
- Cable lengths of up to 400 m are possible between screw-type flow meter and switching amplifier.
- LED's for monitoring line breaks / short circuits, channel switching state and power supply are located on the switching amplifier.

Technical Data of Switching Amplifier K-130/3-E-10

Power supply

Supply voltage cl. 7 (L+), cl. 10 (L-)
Ripple content white Wss

Product Portfolio

Transfer Pumps

Transfer pumps for lubricating oil supply equipment, low pressure filling and feed systems, dosing and mixing systems.

Mobile Hydraulics

Single and multistage high pressure gear pumps, hydraulic motors and valves for construction machinery, vehicle-mounted machines.

Flow Measurement

Gear and turbine flow meters and electronics for volume and flow metering technology in hydraulics, processing and laquering technology.

Industrial Hydraulics / Test Bench Construction

Cetop directional control and proportional valves, hydraulic cylinders, pressure, quantity and stop valves for pipe and slab construction, hydraulic accessories for industrial hydraulics (mobile and stationary use).

Technology Test benches / Fluid Test benches.
